

ON-SITE Gate Access App “Codice!”

Revenue Control Systems **On-Site** access controllers have the optional capability to use our “Codice!” Phone App to access a facility without entering a code on a keypad unit. The app allows a tenant to access the facility by entering their code on the app as they drive up to the gate without having to lower their window. This is much appreciated by your tenants on rainy and cold days. The Codice! app also gives your managers gate control and monitoring abilities from their phones for multiple sites and gates from anywhere.

The app will be customized to each facility with your company logo, site keypad configuration, and direct link buttons. The direct link buttons will allow the tenant to reach the facility’s pay online page, rent online page, and to call the facility manager all from the Codice! app.

The Codice! App pairs great with the email and texting notification system built into the **On-Site** system, which sends notifications to managers when certain events occur, like when a tenant stuck at a keypad. They can then use the Codice! app to check the gate activity and open the gate for the tenant if needed.

The tenant can simply download the Codice! app to their phone or device from either the Google Play Store or the Apple App Store. Each facility will have a unique activation code to activate the app for only that location. After the activation code has been entered, the tenant will see the app home screen for the facility they are storing with. The app will let the customer enter their code and click send when they are in close proximity to the gate, allowing the gate to open. The tenant can select any gate at the facility. There is no need to enter their code on the physical keypad, and the tenant’s code will be saved in the app for easy use on future visits.

Key Features:

- Tenants can open gates from their phones when GPS shows them on the property
- Managers can open or hold open gates from anywhere in the world in case of emergency
- Codes are checked for access privileges as if they were typed in on the keypads
- Codes can be 1 to 10 digits long
- Each facility app is customized with a company logo and links to the facility’s website and phone number
- Managers can view the gate activity log from the app
- Managers can select, monitor, and control multiple facilities and gates from one app
- Unlimited number of users
