Cloud Access Control for Self Storage

All Sites, full control and reporting, any browser, any operating system, multiple and simultaneous connections from anywhere.

Managing a multi-site storage portfolio shouldn't require a physical presence at every site. Our **Enterprise Management Platform** provides a centralized, cloud-based command center that scales with your business. Includes the best Phone Support in the Storage Industry, and half the yearly fee of our competitors.

Enterprise-Level Multi-Site Control :

Gain absolute visibility and control over your entire portfolio from a single, intuitive interface.

- **Portfolio Dashboard:** Manage 1 to 1,000+ locations from a single login. Monitor real-time status, including *Online/Offline* health and critical alerts like *AC Power Failure*, *Low Battery*, *Tamper*, and *Gate Status Alarms*. Multi-site overview and single site detail view
- **Company-Wide Access Codes:** Effortlessly deploy *Corporate*, *Vendor*, and *Maintenance* keypad codes across one site, a specific region, or your entire portfolio simultaneously.
- **User Permission Control:** Assign specific group roles for on-site managers versus corporate staff. Define exactly who can view reports, edit users, or issue remote gate commands based on their level in the organization (Corporate, Regional, or District, etc).

Intelligent Automation & Reporting :

Streamline operations with smart features that reduce manual oversight and increase security.

- **Automated Visitor Management:** Securely generate 6-digit visitor codes that automatically *Auto-Expire*. Set custom start and expiration dates to handle *auctioneers*, *contractors*, or *delivery drivers* without manual follow-up.

- **Real-Time On-Site Tracking:** Instantly view who is currently at your facility. Features a *No Exit Recorded* function, to monitor potential stay overs.
- **Portfolio Reporting:** Access portfolio wide reports, including delinquency rates, traffic volume, and *Ghost* (inactive) tenant analysis. Every action is logged with precise site time stamps and user identification for full audit compliance.
- **User Activity Reports:** See when your staff logs in and from where. Keep track of when users are created, deleted, or modified.

Advanced Mobile Experience :

Keypad Control Enterprise in your pocket, for corporate, site staff and tenants.

- **Remote Command Center:** Issue *Open Once, Hold Open, or Area Closed, etc.* commands directly from your mobile device. Commands can be scheduled for a specific duration or until a set time to accommodate special events.
- **Proximity Enforcement (Geofencing):** Our App prevents unauthorized remote gate triggers by verifying the tenant is physically on-site before granting entry.
